Update on the CSO Leavenworth Lift Station Replacement Project

Construction continues for the Leavenworth Lift Station Replacement Project.

The existing Leavenworth Lift Station at 1st and Leavenworth Street was constructed in the early 1960s with the existing South Interceptor Force Main and other conveyance facilities along the Missouri River. The existing lift station has an operating capacity of 17 million gallons per day (MGD). The new facility will include screening and grit removal and will have the capacity to pump approximately 7 MGD during dry weather conditions and 45 MGD during wet weather conditions.

In addition to pumping flows from the Leavenworth Street Sewer, the new Leavenworth Lift Station will also handle flows being diverted from the Pierce Street and Hickory

Street Basins. Both the Pierce Street Lift Station and Hickory Street Lift Station will be decommissioned when construction is completed. The lift station is located south of the Union Pacific Railroad Bridge that crosses the Missouri River at approximately 4th Street and Pierce Street.

Schedule:

Construction activities are on schedule. Work is anticipated to be complete by July 2014.

January 20, 2014

in collaboration with the Old Market South Neighborhood Association

St. Joseph Assisted Living Tower
2205 S. 10th Street • 7:00
