

Fontenelle Park Lagoon

CSO Infrastructure Project

What once was a public golf course is now a beautiful, expansive park designed for families, fishing enthusiasts and health-minded people from all over the city.

Fontenelle Park has been transformed into a lush community amenity, with trails, picnic tables and an expanded lagoon with habitat that can sustain fish and other aquatic life. The re-designed park is an important part of the City's CSO Program which has created a stormwater detention system at the lagoon – it offers an environmentally-friendly way to capture rainwater and snowmelt to lessen the demands on our city's sewer systems and improve water quality.
